8 key questions to ask your data privacy software vendor

Want to learn more about Ketch?

Scan here to schedule a meeting with our team at IAPP GPS 2023 and register for our happy hour and wrap party events!

Every data privacy vendor claims their software is the best on the market-but you shouldn't take a vendor's claims at face value. Instead, conduct due diligence to understand their technical infrastructure and approach to solving your specific data privacy challenges. These are the eight key questions your vendor should be able to answer to your satisfaction.

How do you handle web infrastructure like tags and cookies?

To comply with modern data privacy regulations, you need to ensure that website visitor data collection occurs after consent is confirmed. The best data privacy solutions will integrate with your tag manager to ensure automated compliance, while still leaving you in control of your website infrastructure.

How do you enforce people's privacy choices across downstream data systems?

Consent collection is the first half of data privacy compliance; the second, essential step is enforcing those user preferences everywhere sensitive data resides in your data ecosystem. At Ketch, we call this consent orchestration: automated, end-to-end collection and enforcement of privacy choices, leveraging our robust marketplace of custom-built APIs for your applications.

How do you adapt to new regulations?

There is no shortage of new data privacy legislation, and you need a data privacy vendor that scales without limits. Many data privacy platforms struggle with this, requiring customers to pay additional for new jurisdictions or modules. Alternatively, the Ketch platform architecture is built on purposes instead of specific regulations; acting as customizable building blocks that adapt to every conceivable regulation, now and in the future.

Do you automate data subject rights requests?

When you receive a rights request, you need to honor it swiftly-even if it means changing permissions or deleting data in a service partner's system. Few solutions genuinely automate this process; most "automated" systems merely supply workflow tools or send form emails, leaving you to manually verify compliance.

Can you customize privacy experiences?

The best platforms have built-in content management tools for creating privacy notices that match your brand voice and styling. Look for solutions that also enable you to optimize delivery timing and share messaging when they make the most sense, without interrupting user experience.

Is your system cookie-based?

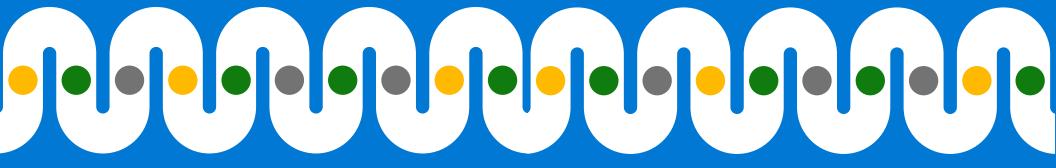

Cookie-based consent management solutions are an antiquated approach to data privacy. More than capturing a single narrow consent signal. modern data privacy laws require you to capture the *intent* behind that signal. You need to understand the purpose for which you have permission to use data, such as analytics or advertising. Seek out a comprehensive solution that helps you capture consent aligned to purpose of processing data.

Do you support identity management?

The best solutions include robust identity resolution to recognize individuals across devices and touchpoints, enabling you to remember user consent preferences no matter how they engage with your brand.

What does your platform include beyond consent management?

First-generation data privacy vendors are focused on "checking the box" on compliance. Modern, next-gen vendors are employing new tech like automation and machine learning to embed data privacy in the fabric of your data ecosystem. For example, the Ketch platform includes native data discovery and classification, integrated with our privacy management software.

Microsoft Priva Build a privacy resilient workplace

Identify critical privacy risks and conflicts

Automate risk mitigation and subject rights requests

Dechert's Global Privacy & Cybersecurity Practice

Dechert's global Privacy & Cybersecurity practice is second to none. We provide seamless, holistic service to clients across the globe, including strategic counseling and advice, data breach response, deal diligence and the defense of regulatory enforcement actions and class action litigation.

Experience in high-profile, cutting-edge matters.

Our matters are featured in front-page headlines, but our best work is often on matters that no one ever hears about, such as the regulatory inquiry that quietly goes away, or the creative, sophisticated strategic counseling advice that solves a company's thorniest cross-border data transfer issue.

Award-winning, top-ranked team with an experienced bench. We have a deep, global bench of senior partners with decades of experience, several of whom are pioneers in the space. Our innovative work has been recognized with major honors from top organizations around the world.

Industry-specific knowledge. We have extensive experience advising and successfully representing clients in the financial services, asset management and investment funds, advertising and media emerging technology, telecommunications, health care, life sciences, and real estate, among others.

Global footprint. In the past year alone, we have advised on matters involving Australia, Belarus, Belgium, Brazil, Canada, China, European Economic Area (EEA), Germany, Hong Kong, Israel, Japan, Norway, Singapore, Switzerland, UK and the U.S.

Achieving privacy through innovation

Today, computing no longer happens just on a phone or a laptop, but across your home, in your car, on your wrist and in the cloud — helping you wherever you are. Such computing requires technological innovation to work across complex and different experiences, and it equally demands an **evolution of technologies** to keep your data safe and private.

Challenge

Keeping data private and safe across multiple environments presents new, complex, technical challenges

The number of smart devices and information services we all use everyday has grown exponentially. Data is constantly flowing between these surfaces, presenting new technical challenges to keep it private and safe. Meanwhile, cyberattacks are becoming more sophisticated with bad actors targeting valuable data and critical infrastructure.

Focus is required at all levels:

- Building privacy architectures that protect data wherever it lives in today's connected world.
- Increased collaboration between organizations, businesses and governments to keep the internet open, private and safe for everyone.

Our solution

At Google, we help **keep people safe** online by upholding responsible data practices, putting users in control of their information and advancing privacy protections to provide even more helpful experiences without compromising user privacy. To help keep the whole ecosystem safe, we **open-source** privacy-enhancing technologies, so anyone can freely apply the same protections to their users' data.

Upholding responsible data practices

We strictly uphold responsible data practices designed to respect user privacy.

Putting users in control of their information

We build easy-to-use privacy tools so users can choose the experience that's right for them.

Advancing privacy protections

We use advanced technologies to transform how data is processed and open-source privacy-enhancing technologies.

Privacy Begins with Data Discovery

High-value and sensitive data drive your business. But data increases your risk as well. Organizations need a holistic view of risk across data of all types and repositories to address how best to protect their data "crown jewels", and support corporate financial, cost, and sustainability objectives.

Read flyer

Relyance AI enables organizations to match the speed of privacy and compliance operations to the speed of engineering and business operations. Data protection and trust go far beyond borders, organizations, and teams. Relyance AI is not just shifting left—it's flipping the approach to data protection on its head by leveraging machine learning to build a global, cross-functional, comprehensive solution to seamlessly manage privacy, data governance, and legal operations. Built by domain experts, Relyance AI is the only data protection platform that offers privacy at the code level—without the intrusion.

What Makes Relyance Al Different?

Relyance Al's core differentiators are **quick implementation time**, **automation**, **code** and **contract integrations**, and **intelligent insights**. Competing solutions rely on manual workflow solutions or require excessive data access, and do not offer real-time visibility into how applications process personal and sensitive data.

LIVE DATA INVENTORY & MAP

Relyance AI integrates with existing infrastructure monitoring tools to generate a dynamic data inventory and map. This automated process eliminates surveys and spreadsheets to determine what infrastructure processes personal and sensitive data and provides live views of data in motion and data at rest. Relyance AI does not store underlying customer or user data to create the Live Data Inventory & Map.

DATA SUBJECT REQUEST MANAGEMENT

The Data Subject Requests module is highly configurable and helps customers automate privacy rights management for data subjects. After collecting data subject requests via a customer-branded privacy portal, the module searches through systems and compiles, deletes, and/or exports relevant data for the data subject.

DATA PROTECTION ASSESSMENTS

This module, which includes
Assessments for: Privacy Impact,
Data Protection, Transfer Impact, as
well as Legitimate Interests and
others, automates the creation and
maintenance of these Assessments
by prefilling up to 70% of the required
information with up-to-date
intelligence from the data inventory,
data map, ROPAs, and other
proprietary Relyance AI technology,
saving time and dramatically reducing
errors.

AUTOMATED UNIVERSAL ROPA GENERATION

Our patent pending Universal ROPAs module generates ROPAs for third-party vendors and internal services that are designed to work across all jurisdictions. Relyance Al also provides visibility into sub-processors, termination clauses, sensitive data types, and other critical privacy metrics needed for a robust privacy program.

5 Hours to Value

Relyance Al's streamlined implementation means less than 5 hours to a continuous, automated global data map and data inventory, along with data-driven business insights.

"We chose Relyance AI because it had an amazing data map solution that, with a few lines of code, helped us map our data flows and confirm what systems we were using, with minimal integration time required by our engineers."

Stay Vigilant, Mitigate Risk and Provide Sound Compliance Advice to Your Company

Ensuring that your organization, its employees and your external business associates comply with shifting laws and regulations is especially challenging today. You can more effectively reduce risk, avoid penalties and help your company succeed with timely, convenient LexisNexis® compliance solutions.

Identify, Track, Analyze and Report Legislative and Regulatory Developments

The range of regulators, complex nature of regulatory change and wide range of legislative activity happening at many levels make monitoring developments and determining relevance difficult. But with **LexisNexis® State Net® workflow tools**, you can identify, track, analyze and report relevant legislative and regulatory activity in a timely manner.

State Net tracks more than 150,000 legislative and 50,000 regulatory measures annually. Our service allows you to quickly cut through high volumes of data to identify current, relevant intelligence, assess the impact on your organization and respond effectively. Learn more here.

Research and Act on Multi-jurisdictional Developments

Mitigate risk and stay on top of change using the **Lexis+®Corporate Compliance Suite**. This convenient combination of corporate compliance content and easy-to-use tools helps you anticipate, research and respond to multi-jurisdictional developments in areas including antitrust, data privacy and security, mergers and acquisitions, corporate disclosures and more. Learn more here.

Vet Vendors and Other Third Parties Thoroughly

Safeguard your company against risk involving vendors and third-party partners with one-stop access to critical intelligence using the **Nexis Diligence™ service**. Global content, simplified search and a fixed price help you significantly reduce the time and expense of conducting background checks.

Use Nexis Diligence to research entities, explore associated entity interests, verify ultimate beneficial ownership, check for red flags and develop an entity profile with ease. Learn more <u>here</u>.

Anticipate and Advise Your Company on Global Regulatory News

Stay on top of changes in the international regulatory landscape with trusted **MLex® news and analysis** involving antitrust and competition, data privacy and security, financial crime, mergers and acquisitions, sector regulation, state aid and trade.

Based in 15 bureaus worldwide, the global MLex team of investigative journalists provides unbiased, authoritative, forward-looking news and commentary explaining how regulatory risk can impact businesses. Learn more here.

PrivacyCheck

A privacy-enhancing technology (PET) for any organization that works with location data and wants to ensure that data generated by consumer mobile devices while visiting sensitive locations is never used, shared, or resold.

Remove privacy-sensitive data

Easily identify and remove sensitive precise location data from databases.

No data sharing required

On-premise data processing technology keeps sensitive data private.

Reduce business risk

Ensure no privacy-sensitive data is accidentally shared or used.

Benefits of verifying precise location data with PrivacyCheck

IMPROVED DATA QUALITY & PERFORMANCE

Find, filter, and remove data from privacy-sensitive locations

With PrivacyCheck, organizations can confidently work with location data and analytics — whether it's their own precise location data or licensed from a data provider — knowing that the underlying data complies with consumer privacy best practices.

TIME-TESTED LOCATION DATA EXPERTISE

Manage location data privacy using industry best practices

PrivacyCheck lets every organization benefit from the same technology that Gravy has used since 2019 to ensure that its products remain privacy-friendly. Now, PrivacyCheck provides every organization with an effective and efficient way to implement privacy-enhancing technology in a dynamic regulatory environment.

PRIVACY FRIENDLY NOW AND IN THE FUTURE

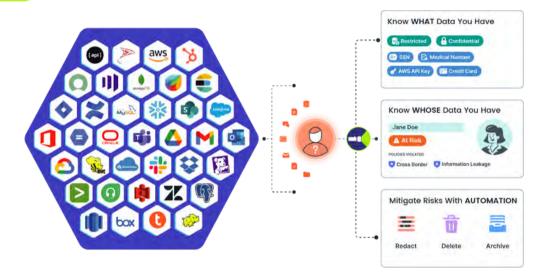

Customizable privacy compliance for your organization

As a managed, subscription service,
PrivacyCheck ensures that subscribers always
check their data against the most up-to-date
and comprehensive list of sensitive locations
available. Customers of PrivacyCheck benefit
from more than 123 sensitive place categories,
including health centers, places of worship,
military bases, schools, and more.

DATA SECURITY & PRIVACY AUTOMATION

AI-POWERED | IDENTITY CENTRIC

About LightBeam

A leader in data security & privacy automation, LightBeam has rapidly gained customers' trust by pioneering a unique identity-centric and automation-first approach to data security and privacy compliance. LightBeam's self-learning AI platform natively secures sensitive data by redacting/deleting/archiving objects with sensitive information, and keeps you in continuous compliance for audits. Unlike siloed solutions, LightBeam ties together sensitive data discovery, cataloging, access, and data loss prevention (DLP).

LightBeam is on a mission to create a secure privacy-first world helping customers automate compliance against a patchwork of existing and emerging regulations.

Know WHAT Sensitive Data You Have

Images, Screenshots, Docs, Emails, Databases, Logs, Tickets and more.

Context-aware natural language processing (NLP) engine finds sensitive data where you least expect it to be. Enable privacy by design with code and log scanning, and eliminate data loss with image detection.

Know WHOSE Data You Have

Is your customer/patient/employee data being exposed?

LightBeam's AI platform detects fragments of sensitive data, and helps privacy and security teams pro-actively contain any exposure risks for customers / patients / employees / partners data.

Mitigate Risks with AUTOMATION

Can we automate compliance?

Customers can automate their data discovery, classification and cataloging and contain data security risks associated with processes such as ingress/egress, sharing and migration, accelerating their businesses without risks.

Observe Point

Want to Know What's Really On Your Site?

ObservePoint audits and monitors all data collection points to help you answer these questions and more.

- Get the full details on your cookies and data collection
- ✓ What data is being collected and where is it being transferred?
- Set up Rules and Alerts to notify you when something changes
- Test real user consent preferences, including GPC
- How well is your consent management platform (CMP) implemented?

Let us show you how we can help you with privacy compliance on your website. Fill out the form <u>here</u> to run a 50-page Privacy Sample Audit on your preferred domain.

Then stop by booth #609 to review your results.

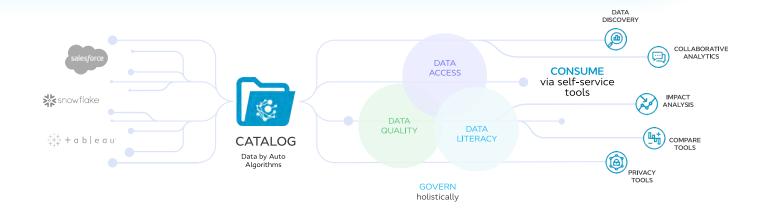

We'll give you a \$10 Amazon gift card as a thank-you for your time!

A DATA CATALOG & END-TO-END GOVERNANCE PLATFORM

Make your entire organization's data ACCESSIBLE, TRUSTWORTHY & HIGH QUALITY

OvalEdge catalogs entire organization's applications, databases, warehouses, and reporting systems and makes it accessible to every user with well-defined access policies. It makes the data easily understandable & trustworthy through its comprehensive data literacy program. The data quality program keeps improving the quality of data in its lifecycle. Then, it provides various tools for adoption.

CORE FEATURES

DATA CATALOG: A single source of reference to easily search data across all source systems and collaborate.

DATA ACCESS MANAGEMENT: Fine-grained access control & governance across data sources through a unified access console.

BUSINESS GLOSSARY (AI): Build consistent definitions of data terms with the help of tools and best practices.

DATA LINEAGE: Map your data flow up to column level automatically.

DATA PRIVACY: Identify and manage PII/confidential data with AI to comply with data regulations.

DATA QUALITY: Improve quality through data quality rules and business processes.

ENCOURAGE ADOPTION: Out-of-the box toolsets like plugins, query-sheet, compare tools to improve adoption.

TRUSTED BY MARKET LEADERS

Detect drug diversion 80%+ faster

Compared to legacy solutions

Protenus Drug Diversion Surveillance

Drug Diversion is the growing, invisible enemy of hospitals and health systems across the country. With the Protenus Drug Diversion Surveillance solution, you can:

- Harness the power of a risk reduction platform to audit up to 100% of medication use transactions
- Reduce the risk to your workforce, your organization, and most importantly, your patients
- Identify and surface incidents automatically from a broad range of data sources

"I have sat in on at least six other diversion platform demos, and I have done extensive research on their abilities. The product is probably one of the best, if not in the top three. A vendor can only be so proactive, but Protenus is definitely at the upper echelon. Then based on my use of the application itself, it is doing exactly what the vendor says it is supposed to be doing. It is relaying the information to us proactively, and that is just as described."

Manager, April 2022 (KLAS Research Survey respondent)*

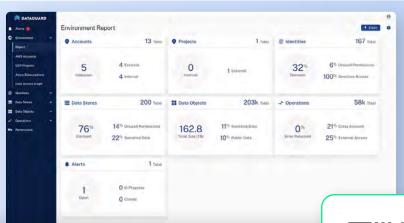

Drive Data Security with Compliance Built-In.

Protecting financial, operational, product, and customer data is paramount to security. That's why regulators and industry standards continue to reinforce data security and privacy requirements.

Discover, Classify, & Control Data with DataGuard

DataGuard from Symmetry Systems provides full visibility into all of your sensitive data across your business-regardless of whether it is on-premises or in the cloud

Prove Compliance with Data-Level Precision

Visit symmetry-systems.com

Answer your biggest data compliance questions

- What sensitive data do we have and where is it?
- Who and what can access it?
- How is it being used?

Ensure Data Residency & Sovereignty

Ensure your regulated data is only stored in the appropriate jurisdictions and provide evidence of residency and data sovereignty controls with just one click.

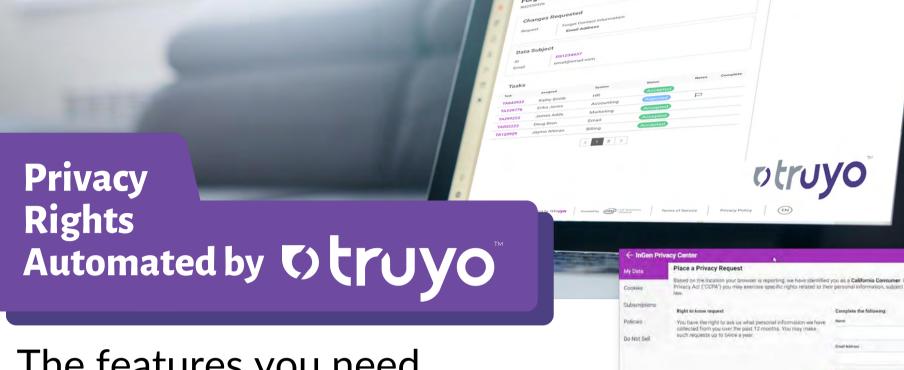

Pass Audits & Drive Proactive Data Security

Stay up-to-date with where regulated data is stored and what steps need to be taken to keep it secure according to the standards, like SOC2, GDPR, FedRAMP, HIPAA and others.
