AIGP

iapp

Artificial Intelligence Governance Professional training is designed for any professional tasked with developing AI governance and risk management in their operations. It provides baseline knowledge and strategies for responding to complex risks associated with the evolving AI landscape. The AIGP curriculum was developed by a panel of AI and governance experts.
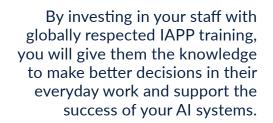

It teaches AI's technological foundations and development cycle, existing and emerging laws, risk management strategies and much more. It is excellent preparation for anyone pursuing **IAPP Artificial Intelligence Governance Professional** certification.

Embrace AI's benefits and reduce risk by taking **IAPP TRAINING**

Protect your enterprise with trustworthy AI governance

Artificial intelligence's promise is tempered by persistent concerns about bias, data use, privacy and copyright. Despite those concerns, pressure to implement AI applications often outweighs enterprise's abilities to weigh and reduce risk.

IAPP training provides the knowledge to meet your AI governance challenges. Our training programs develop professionals with the knowledge to reduce risk, improve compliance and increase brand loyalty by implementing appropriate controls and procedures. We can tailor programs to meet your enterprise's specific learning needs through in-person and online instruction. Embrace AI's transformative potential by exploring your IAPP training options today.

By investing in your staff with globally respected IAPP training, you will give them the knowledge to make better decisions in their everyday work and support the success of your AI systems.

AI GOVERNANCE PROFESSIONAL TRAINING

This training teaches critical artificial intelligence governance concepts that are also integral to the AIGP certification exam. While not purely a "test prep" course, this training is appropriate for professionals who plan to certify, as well as for those who want to deepen their AI governance knowledge. Both the training and the exam are based on the same body of knowledge.

MODULES:

Module 1: Foundations of artificial intelligence.
Defines AI and machine learning, presents an overview of the different types of AI systems and their use cases, and positions AI models in the broader socio-cultural context.

Module 2: AI impacts on people and responsible AI principles.
Outlines the core risks and harms posed by AI systems, the characteristics of trustworthy AI systems, and the principles essential to responsible and ethical AI.

Module 3: Responsible AI governance and risk management.
Examines the details of building AI governance, including collaborating with major AI stakeholders, defining roles and responsibilities, and identifying and managing risks.

Module 4: Governing AI development.
Explains considerations for planning, designing and building AI systems, including governing data collection and use in AI design and development.

Module 5: Governing AI deployment.
Addresses best practices for the preparation and execution of AI deployment, as well as post-implementation activities.

Module 6: The EU AI Act.
Discusses key points related to terminology, risk levels, requirements, governance and enforcement as laid out in the EU AI Act.

Module 7: Other laws and standards related to AI.
Surveys the existing laws that apply to AI and provides awareness of liability reform. Describes relevant global laws and major frameworks and standards that exemplify responsible governance of AI systems.
